

ROWKeeper

powered by Clearion Software

Clearance along the right of way is essential for system safety and reliability, and the right tools can help you achieve better results from your vegetation management program.

Davey Resource Group's ROWKeeper software now uses the latest technology from Clearion Software to help utilities plan, track, and analyze ROW line clearing programs. ROWKeeper *powered by Clearion Software* helps utilities manage costs, improve work processes, meet customer expectations, and comply with ever increasing regulatory requirements.

CLEARION
SOFTWARE

ROWKeeper

powered by Clearion Software

ROWKeeper powered by Clearion Software

ROWKeeper *powered by Clearion Software*, built with ESRI ArcGIS™ technology, allows for:

- Faster data creation
- Easier work tracking
- Better data management

With ROWKeeper *powered by Clearion Software* technology, Davey Resource Group can:

- Create geographical vegetation inventories and treatment prescriptions
- Collect location and attributes of customers and sensitive areas using GPS
- Generate work summaries by project for bidding and cost estimation
- Store historical vegetation data in a central database
- Analyze crew performance, work progress and program effectiveness
- Share project data with contractors and managers
